Versity 92

At Spectralink, we understand that all members of your healthcare team have different needs on the job but have one thing in common: a need for user-friendly, secure, lightweight, durable device that just works. Our Versity Family of Wi-Fi enterprise-grade smartphones have been purpose-built for the rigors of a demanding healthcare environment, each with a different type of user in mind, and each with our leading voice quality.

Versity 95/96 Series is designed for your clinicians on the front lines – those working closest to the bed of the patient, like nurses and doctors. It's the rugged phone with the big screen that can withstand cleanings with hospital-grade disinfectants. It's the premium solution that puts information, notification, documentation, and communication right at clinicians' fingertips. And it does it securely. Safely. And with leading applications to care for your patients' most critical needs.

Versity 92 Series is for your non-clinical workers such as patient transport, materials management, and long-term care staff. Versity 92 provides critical healthcare teammates with constant connection to patient healthcare teams. It allows them to support clinical staff and care for patients in more productive ways. And, Versity 92 seamlessly integrates with a healthcare system's workflow, task management, maintenance, and secure messaging applications, replacing the toolbelt of mobile devices often carried by staff such as pagers, barcode scanners, two-way radios, and wireless phones.

Whatever the position, Spectralink enables all healthcare roles with our Versity Family. **With Versity in Healthcare, mobility just works.**

for Wi-Fi

Device Management and Call Performance Monitoring

AMiE

ADVANCED MOBILE INTELLIGENCE
FOR ENTERPRISES

A cloud-based solution management platform for IT and Telecommunication Administrators to monitor battery health, troubleshoot call performance issues, analyze device versus network performance, locate missing devices, balance device utilization, and receive proactive alerts from one centralized dashboard.

Your employees need reliable communication devices and networks that are always up and running, without dropped calls, poor voice quality, or other issues interfering with the ability to do their job. You've put the right Spectralink devices in their hands, but how do you manage them all in the most efficient way to avoid downtime and interruption, proactively troubleshoot any issues with your fleet, and get the most out of your solution and investment?

AMIE™ (Advanced Mobile Intelligence for Enterprises) Advanced supports mission-critical mobility for optimal team performance and workflow efficiencies, and provides visibility into the most common concerns in mobility management of shared and non-shared devices that other tools do not provide to quickly identify and resolve issues.

Benefits

- Save time and money with the ability to provide better support and an overall picture of how devices are performing on the network; not just troubleshooting
- Increase operational efficiency
- Mitigate risks in service disruption
- Decrease problem resolution time
- Avoid unnecessary disruption in communications

AMIE Main Dashboard
Full operational view of devices across the enterprise from one screen, remotely, or on-site

Locate Missing Devices
Know which devices have not checked in and determine the location of the missing device's last connection with the floorplan view

Call Performance Analytics
View detailed call quality analytics by device and access point

Device Utilization Planning
View the percentage of utilized and unutilized phones to balance device utilization across users, departments, or shifts

Device v. Network issues
See various performance metrics for devices and access points side by side to determine the source of the problem

Battery Management
Monitor the battery health for individual batteries and alert users when a battery is end of life

Proactive Monitoring and Alerting
Receive alerts of device, battery, Wi-Fi network, or call quality issues as they arise
