

Vocera Hands-Free Communication Devices

Be Connected. Be Protected.

The pace, complexity, and unpredictability of the hospital environment require care team members to continuously juggle multiple tasks, field interruptions, and reprioritize. To address the mounting challenges that care teams face daily, they need tools that help streamline communication, minimize interruption fatigue, and safeguard staff – without compromising patient care.

The Natural, Intuitive Way to Communicate in Healthcare

Simplify hospital communication and workflow and improve staff safety with Vocera hands-free communication devices. The Vocera Smartbadge and Minibadge are lightweight and purpose-built for the patient care environment.

Just say, “OK Vocera” to wake up either device and start communicating safely, even under restrictive PPE. Make and receive calls hands-free, and reach people by name, role, or group. In an emergency, activate the dedicated panic button to reach security personnel quickly.

Smartbadge

With the Smartbadge, combine smartphone usability and hands-free mobility. Use the ample touchscreen to find contacts quickly, with a real-time view of patients and staff across multiple sites. Read and type text messages, and receive alarm notifications with context about the patient, event, and care team. Hold the device like a handset for privacy as needed.

Minibadge

Use the Minibadge to make and receive calls and listen and respond to messages and alarm notifications hands-free. Triage the urgency of events fast with visual indicators. Use the Minibadge with your smartphone to view and share detailed patient, event, and care team context for messages and alarms when needed. Take calls on the Minibadge or transfer them to your smartphone. For privacy, use a headset.

Complexity Begs Simplicity

With Vocera hands-free communication devices, care teams can:

- **Communicate intuitively:** Make, receive, transfer, and forward calls using a natural, voice-driven experience.
- **Improve staff safety:** Communicate safely, even under restrictive PPE, to help reduce the spread of infection. In an emergency, activate the dedicated panic button to discreetly open a communication channel to the response team.
- **Manage availability to focus on critical patient care:** To help reduce alarm fatigue, set your device to do-not-disturb mode and accept or decline alarm and event notifications. Avoid communication dead ends with call escalation to the next available person or team.
- **Easily reach the right person or team:** Reach contacts by saying their name, role, group, or extension. Page a user or group. Call people inside or outside your health system.
- **Triage events quickly:** Determine the urgency of events via alarm notifications with detailed context on the Smartbadge or LED indicators on the Minibadge.
- **Leverage smartphone functionality:** Get smartphone usability and hands-free mobility with the Smartbadge’s ample touchscreen. Use the Minibadge with a smartphone to view and share detailed patient, event, and care team context.

Choose the right device for your role and workflow
