

# Hospital-wide messages, notifications and alarms

## A Connected Workforce and Connected Environment

By providing hospitals with an enterprise system for processing all messages, notifications and alarms, Olinqua supports extensive clinical communication, a cornerstone for enabling the highest quality of patient care.

### Better communications and response to critical incidents

Respond quickly and efficiently to emergency situations

Olinqua's critical incident response technology has been carefully developed to offer hospital staff the tools they need to respond quickly and efficiently to emergency situations.

Olinqua's technology supports the delivery of information, faster and smarter, to the right people via:

#### Hospital-wide messaging capability

– so the right people are notified.

#### Code information

– to ensure the correct equipment is gathered.

#### Triggers for specific protocols

– to ensure the right processes are followed.

#### Forensic reporting capabilities

– to enable fully traceable follow-up care.

# Critical incident reporting

**Seamless, coordinated response, to the right teams at the right times**

Olinqua's technology solutions provide secured access to forensic reporting that enables staff to report against important hospital KPIs (e.g. what protocols were followed, how long were response times).

The fully traceable and detailed reporting removes staff overheads and administrative burden, creating more efficient and accountable workplaces while improving productivity and patient responsiveness.

**Messaging Integration Engine: Powering better, faster critical incident management**  
Enabling seamless, coordinated response, to the right teams at the right times!

Olinqua's Enterprise Messaging Integration Engine (MIE) is a one-stop-shop system for processing all messages, notifications and alarms across a hospital. MIE supports Facility Messaging and Clinical Communication with the use of emergency codes, the inclusion of triggers for specific protocols (e.g. gathering points) and smart and integrated systems. All of this enables staff to communicate and react effectively to critical incidents.

The benefit of Olinqua's Messaging Integration is far-reaching. Through this installation, hospitals can also access:

- Real-Time Location System For Facility Monitoring
- AI-supported Asset Tracking
- Hospital Collaboration & Communications
- Mobile And Fixed Alarm Duress For Staff Safety
