

A digital solution to enhance hospital & staff safety

Staff safety is crucial for hospital workers and critical care team members in high-risk environments.

Olinqua's mobile and fixed point duress alarms provide increased security measures for staff in ED, mental health, and other high-risk hospital departments, where managing patient locations can pose heightened concerns for staff safety.

Duress system options to suit all hospital environments

Olinqua's duress systems cater for alarms in a wide variety of locations and formats to provide workers with a direct line to help whenever personal assistance is needed. This could include:

- Wall alarms
- Mobile phone alarms
- Wearable necklace alarms

Staff safety at the touch of a button

Olinqua's mobile and fixed duress solutions have been built with powerful safety features, accessible at the touch of a button:

Direct Line of Sight

Offering active acute or covert events in view, and information including incident commander, who needs to be where, location, direction and current conditions.

Location Intelligence

Find critical equipment, identify people with specialist knowledge or skills, get a visual of floor plans, rooms, access, hallways, egress, and more.

Advanced Messaging

Send secure private or group messages instantly, have a direct line of communications with nearby devices, with the option to alternate line sources if needed.

Smart Tag Detection

Safety tags provide automated sensors, false alarm detection, direct and alternate traffic routes for hazards with information on blocked locations or dangers ahead.
